

SOUTH SUDAN

Global value chain participation and development

South Sudan's participation in global value chains, 2019

Note: Countries are classified as low income, lower middle income, upper middle income, and high income according to the World Bank Country and Lending Groups. Countries classified as "resource-rich" for this chart are countries for whom over 10% of GDP came from oil, gas, coal and mineral production for at least 5 years between 2010 and 2019.

Sources: Authors' calculations based on data from Casella et al. (2019), UNCTAD-Eora Global Value Chain Database, <https://worldmrio.com/unctadgvc/>.

A measure of the degree to which a country's production derives from integration into the global economy is its "forward" and "backward" global value chain (GVC) participation (see box). This measure tends to be related to a country's level of income, as well as whether it is a "resource-rich" country, or a country in which extraction of natural resources plays a major role in its economy.

South Sudan is a non-resource-rich, low income country. South Sudan's backward participation accounted for 0.2% of the country's GDP while forward participation accounted for 4.6% of GDP. The rates of backward and forward participation most closely resembling that of South Sudan were found in Zimbabwe, Ghana, and Tanzania.

What is GVC participation?

Global value chain (GVC) participation or integration is a measure of the proportion of the total value of a country's exports that is generated by global value chains. Total GVC participation is the sum of backward and forward participation. Higher income countries tend to have higher GVC participation due to higher levels of integration in the global economy.

Backward participation is the amount of a country's export value that comes from imported intermediate products. Higher income countries tend to have higher rates of backward participation as they tend to have a greater capacity to transform raw materials and input goods.

Forward participation is the amount of a country's export value that is added by national production and that is embedded in another country's exports. Countries, typically resource-rich and lower income countries, that are more focussed on exporting raw materials than manufacturing, tend to have more forward than backward participation.

Origin and destination of imports and exports (% of total)

Key numbers for South Sudan

Growth per capita/yr, 2022-27	2.4%
Vulnerable employment, 2021	89.9%
Poverty rate (under USD 6.85/day)	97.8%
Frwd participation (% GDP), 2019	4.6%
Bkwd participation (% GDP), 2019	0.2%
Imports as % of GDP, 2020	74.0%
Exports as % of GDP, 2020	23.2%

Regional trade

Origin and destination for South Sudan's trade, 2019 (% of total)

Sources: Author's calculations based on BACI International Trade Database at the Product-Level from CEPII (updated February 19, 2021).

Developing regional value chains will depend on the degree of trade integration between nearby countries. In South Sudan, 53.2% of imports and 10.3% of exports were intra-continental. This was lower than the world average of 55.9% for imports and lower than the world average of 56.8% for exports. Of South Sudan's intra-African trade, 99.4% of imports and 99.4% of exports were within the regional economic communities of EAC and IGAD. Of the world's three largest traders, South Sudan's biggest trade partner was China.

Trade in intermediate goods

Intra-continental trade in intermediate goods, by group of countries, 2020

Source: Authors' calculations based on data from the International Trade Database at the Product-Level (BACI) developed by the Centre d'Études Prospectives et d'Informations Internationales (CEPII, 2020).

South Sudan's trade in intermediate goods, which is the core component of international value chains, was on average 6.9% of GDP in 2020. This ratio was lower than the average of 10% for countries in East Africa, which is lower than the average of 11.7% for countries in Africa and lower than the global average of 10.5%. South Sudan's intra-continental trade in intermediate goods was 61.7% of their total trade in intermediate goods, which was higher than the figure of 22.3% for East Africa, higher than the ratio of 15.3% for Africa and higher than the global ratio of 57.4%.
